QUALITY POLICY

For the Sales of Mooring Equipment and Chains activity developed by TRILLO ANCLAS Y CADENAS NORTHWEST, S.L., the CEO, in his interest in carrying out continuous improvement in their processes and in the satisfaction of their customers, has chosen the implementation of a Quality System based on the International Standard UNE-EN-ISO 9001 and the requirements of the functions as an Authorized Economic Operator (AEO) as the most appropriate way for the development of the organization.

All people in the company must know, understand and apply the procedure by which their activity is guided, guarantee security in the supply chain and collaborate from their position to ensure the correct implementation of the System.

The management is committed to making available to the organization the necessary material and human resources and to attend to all suggestions and complaints of internal and external customers, and to fulfill the requirements as an Authorized Economic Operator (AEO), guaranteeing security in the supply chain.

A Quality Management System must remain "alive", and feed on the errors and successes carried out in the development of the activity, trying to eliminate the first and enhancing the second.

The achievement of these objectives cannot be possible without the involvement of each and every one of the people who make up TRILLO ANCHINAS Y CADENAS NORTHWEST, S.L. and, in this sense, we are grateful for the additional effort that this challenge could entail.
